

# Simple Mood Predictor

A simple Python program that predicts your mood.

By: Mike Maeda

December 2025

# Project Overview

## Core Functionality

- User creates or loads a profile
- User answers 5 questions (Scale 1–10)
- Program predicts mood: happy, sad, stressed, angry, calm, neutral
- Results saved to Downloads

## Purpose

Practice Python fundamentals in a useful, real-world project.

# Program Flow Overview

# The Five Mood Questions

Inputs on a scale of 1–10

Energy ⚡

Positivity 🌞

Stress 😫

Connection 🤝

Control 🧘

# Mood Prediction Rules

High Positivity + Low Stress

→ Happy 😊

High Stress + Low Control

→ Stressed 😫

Low Valence + Low Energy

→ Sad 😞

High Stress + Low Valence

→ Angry 😡

Low Stress + High Control

→ Calm 😌

Otherwise

→ Neutral 😐

# File Storage System

Mike\_mood.txt

2023-10-25 14:30  
Scores: [8, 7, 2, 9, 8]  
Mood: Hapy  
Note: Good coding session!

## How it works:

- Each user gets a dedicated text file
- Saved directly to Downloads folder
- Format: <username>\_mood.txt

```
User: Mike
Age: 19
Reason: health issues
----- Mood History -----
2025-12-08 18:38 | energy=10, valence=3, stress=10,
connection=5, control=5 | mood=ANGRY | note=none
2025-12-08 20:07 | energy=10, valence=10, stress=1,
connection=10, control=10 | mood=HAPPY | note=No
```

## Example Output

Your mood is: HAPPY

Advice: You're feeling good today—enjoy it!

Saved to your file in your Downloads folder.

The file should now be open so you can review it.

Press Enter to continue...|

Example mood history entry generated by the program.

# Challenges Solved

✓ Validating Input- Ensuring only numbers 1–10 are accepted

✓ Error Handling- Managing missing user profiles gracefully

✓ File Safety- Creating safe file names from usernames

# Concepts Learned in Class

**Input/Output**  
input(), print()

**Control Flow**  
If/elif/else

**Loops**  
While loops

**Modular Code**  
Functions

**Data Structures**  
Dictionaries

**Data Persistence**  
File Input/Output

**Program Architecture**  
Main loop structure / Menu System

# Future Improvements

## Visualizations

Add graphs or mood trend charts using matplotlib.

## GUI

Implement a graphical interface using Tkinter.

## Summaries

Generate weekly or monthly mood analysis reports.

## Privacy

Add encryption for sensitive user data.

# Conclusion

- Reliable & User-friendly
- Demonstrates key Python concepts

Thank you!
